BE AWARE

BEFORE AN EARTHQUAKE

- Know where to meet in your COPE area.
- Know the nearest emergency center and route to transport injured.
- Know critical needs of your family.
- Be aware of any unique hazards near your home such as high voltage lines, trees, etc.
- Know the best two escape routes from each room in your home.
- Know where the gas, electric and water shut-offs are located and how to shut them off.
  Test electric and water but not gas!
- Wire gas shut-off wrench to gas meter.

DURING AN EARTHQUAKE - REMAIN CALM

IF INSIDE:
- Seek immediate shelter, duck, cover and hold.
- Stand at least 15 feet from any window or try to get under something that will protect you from falling debris such as a table or desk. Hold on to it.
- In a hallway, sit down against a wall and cover your head.
- Never run outside during a quake.

IF OUTSIDE:
- Move away from buildings to an open area.
- Watch for downed power lines or light poles.

AFTER AN EARTHQUAKE

- Check phones (use phones only for emergency calls).
- Go to pre-arranged COPE meeting location.
- Get car out of garage or carport, park in the direction of evacuation route and load it with supplies in preparation for evacuation, if necessary.
- Have pre-arranged telephone contact out of area so family members will be able to check on your safety and relay messages. (Use phone numbers kept in plastic bag under bed.)
